DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Wednesday, 31 March 2021 at 04:31 local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Fine and sunny weather will lead to Moderate levels of air quality across parts of England and Wales today, with the possibility of some High levels around urban areas. Elsewhere, air quality remains Low although coastal northern Scotland and the Northern Isles will continue to see some locally elevated areas of Moderate air quality.

Tomorrow: As cooler air and a stronger breeze filters across the UK on Thursday, the most extensive areas of Moderate air quality are likely to become confined to parts of southwest England. Most other areas will see Low levels of air quality but northern coasts of Scotland and some eastern coasts of England may see locally elevated areas of Moderate air quality.

Outlook: Much of the UK will see Low air quality levels through this period, but there remains the possibility for some locally elevated areas of Moderate air quality, especially across the north and west of Scotland and where winds are light and variable across other parts of the UK.
